OpenIndia Software: Steps for BRD completion

Project Name: ShowMeOffice

Short Description: Providing location of all government offices

Project Repository: https://github.com/OpenIndiaSoftware/ShowMeOffice

Purpose: We know the basic idea behind the project "ShowMeOffice", but we need requirement specification to start code.

Details:

- The BRD is divided into multiple sections.
- One github issue is created for each section/subsection that need to work on. (for more information about GitHub issues, visit https://guides.github.com/features/issues/)
- One does not necessarily need work on one issue alone.

Steps:

1. Open the issue you want to work on, and add your inputs to the comments in it.
2. We will collect inputs and make final version of BRD.
3. You can also provide your inputs through your preferable means like FB.

   Try to complete steps mentioned in "OpenIndia Software: Steps for sample commit" document which is available at https://github.com/OpenIndiaSoftware/nalanda/raw/First-Commit/Steps%20for%20sample%20commit.pdf So that you can provide inputs directly in the project repository.
